More than insulation

Thin-R | XT/TL-MF Insulation for Drylining Walls

Mechanically Fixed to Battens

Xtratherm Thin-R XT/TL-MF Thermal Liner is a composite insulated panel of Xtratherm Polyiso (PIR) core with foil faces bonded to 12.5mm tapered edge plasterboard for mechanically fixing to internal walls. XT/TL-MF is designed to provide high levels of thermal insulation and dry lining in one operation for suitable masonry walls, sloped rafters and ceilings in new build and refurbishment situations. XT/TL-MF is only suitable for mechanical fixed applications.

Thermal Lining

1

The void created between the timber battens may be used for accommodating services.

Thermal Liner
DOT & DAB - Typical installation

2

Fire Stops

An important factor when dry lining a wall is to provide fire stops along the top and bottom of each sheet and around all openings (Doors & Windows etc). These are provided by the timber battens and prevent fire, penetrating behind the insulation layer it also helps to prevent thermal looping.

3

Integral vapour control layer

The facing on Xtratherm boards provide a gas and vapour tight barrier, taping the joints between the aluminium facing, or taping and filling the joints on plasterboard finishes in accordance with drylining good practice, will result in a vapour control layer being created.

Integral vapour control layer

Drylining & Insulation in one fix

Shorter drying time

Responsive insulation system

Further Guidance - Best Practice

Good workmanship and appropriate site procedures are necessary to achieve expected performance from insulation materials. Procedures set out in the EST Guidance Document CE17 'Internal wall insulation in existing housing - a guide for specifiers and contractors' should be consulted whilst following detailing contained in the DCLG publication 'Accredited Details for Construction'.

Xtratherm Thin-R is a high performance foil faced Polyisocyanurate (PIR) insulation with a certified thermal conductivity as low as 0.022W/mK. Manufactured to strict EN 13165 standards, the closed cell structure and gas tight facings provides excellent thermal performance and moisture resistance. Xtratherm Thin-R products deliver genuine thermally robust performances and are supported with full third party assurances throughout the range.

Specification Clause

The insulated dry lining wall insulation shall be Xtratherm Thin-R XT/TL-MF, 12.5mm plasterboard bonded to __mm CFC/HCFC free rigid Polyisocyanurate core between low emissivity foil faces manufactured to EN ISO 9001:2008 by Xtratherm. The insulated dry lining plasterboard XT/TL-MF shall be mechanically fixed to battens, or proprietary system in accordance with instructions issued by Xtratherm. Refer to NBS clause K10 205.

Installation Guidelines

Mechanical Fixing XT/TL-MF

Fix a pre-treated timber batten horizontally at ceiling level and another 20mm above the finished floor level.

Fix vertical battens at max 600mm centres.

Ensure battens are wide enough to offer 20mm support to all four edges of the plasterboard.

Pack battens if necessary to level the wall.

Trim all openings and service penetrations with timber battens.

Insulation should be cut back to accommodate an adjoining panel at external corners.

Lift the XT/TL-MF Thermal Liner into position using wedges on the floor.

Screws should be fixed to the timber batten at 150mm centres, at least 12mm in from the board edge. The fixings (thermally broken) should penetrate at least 25mm into the batten.

Installation must be in accordance with good dry lining practice. BS 8212:1988 should be considered, careful setting out and planning is essential, fill any gaps with foam filler.

Accredited details should be followed to ensure that calculated performance is achieved.

For comprehensive guidance on Xtratherm Thermal Liners download the 'Xtratherm Guide to Insulated Drylining'.

U-value calculations to BS EN ISO:6946 Walls (XT/TL-MF) Dry Lined

Thickness* (mm)

Wall Type	25	40	50	60	70
300mm Cavity Wall Brick/Block	0.43	0.33	0.29	0.25	0.23
215mm Solid Brickwork	0.45	0.35	0.30	0.26	0.23

*Insulation thickness only. Contact Xtratherm Technical Support for specific U-value calculations.

Resistance 'R' values

The resistance value of any thickness of Xtratherm PIR can be ascertained by simply dividing the thickness of the material (in metres) by its agrément declared lambda value 0.022 W/mk. eg 50mm = 0.050/0.022 = R2.27.

Standards

Xtratherm Thin-R range is manufactured to EN ISO 13165 under Quality Systems approved to EN ISO 9001:2008 Quality Management, EN ISO 14001:2004 Environmental Management and BS OHSAS 18001 Health and Safety Management System.

Storage

Xtratherm Thin-R should be stored off the ground, on a clean, flat surface and must be stored under cover. The polythene wrapping is not considered adequate protection for outside exposure.

Cutting

Xtratherm Thin-R can be readily cut using a sharp knife or fine toothed saw. Ensure tight fitting of the insulation boards to achieve continuity of insulation as asked for in accredited details.

Packaging

Xtratherm Thin-R is wrapped in polythene packs and each pack is labelled with details of grade/type, size and number of pieces per pack.

Availability

Xtratherm products are available through builder's merchants and specialist distributors throughout the UK and Ireland. For the location of your nearest stockist please contact Xtratherm.

Environmental

Xtratherm Thin-R is manufactured under ISO 14001:2004 Environmental Management with all major components sourced under 14001 accredited suppliers. It is manufactured without the use of CFC's or HCFC's and has Zero Ozone Depletion Potential with a GWP of less than 5. Thin-R has been awarded an A+ Rating under the BRE Green Guide.

Durability

Xtratherm Thin-R products are stable, rot proof and will remain effective for the life span of the building, dependent on specification and installation. Care should be taken to avoid contact with acids, petrol, alkalis and mineral oil, when contact is made, clean materials in a safe manner before installation. Solvent based adhesive containing methyl ethyl ketone, should not be used.
