

AlphaCore™ Pure Handling Advice

Delivery

AlphaCore™ Pure is delivered on pallets in protective cardboard packaging.

Manual cutting

AlphaCore™ Pure can be cut with ordinary box cutters.

When cutting, make sure the board is on a non-slip, cut-resistant underlayment. Use a suitable guide in order to make a straight cut.

Stacking

Do not stack more than 2 pallets high.

Mechanical cutting

AlphaCore™ Pure can be cut quickly and easily to the desired dimensions.

We recommend using blades with small serration to prevent dust formation.

Carry upright

AlphaCore™ Pure should be handled with care. The boards are best carried upright.

Drilling

You can drill holes into the boards using any commercially available drill. A high drill speed will achieve better results. Ensure you have an appropriate underlayment.

Corners and edges

To prevent damage, do not apply excessive pressure to corners and edges while handling. Boards should only be placed on their edges with care and for short periods of time; it is best to store and transport them flat.

PPE

We advise you to use personal protective equipment. Please refer to Product Safety Information sheet for further details.
